

Selected examples showing the feasibility of the application of a (future) UTCI

**Joint ISB Comm.6 and JAG/TI meeting
Nov.2002 in Kansas City**

**Trouble-free applications possible of all heat budget models considering Ta, e, v, Tmrt, clo, met
Examples based on Perceived Temperature PT**

The Thermal Environment

Why UTCI?

- Assessment of the thermal environment:
Key issue in human biometeorology
- History: >100 simple thermal indices
- Last 30 years: heat budget modeling
- Integration of new knowledge and concerns
- Need: global harmonization → UTCI (ISB Comm.)

Basic features of UTCI

- Thermophysiological significant in the whole range of heat exchange conditions
- Valid in all climates, seasons and scales
- Useful for key applications in human biometeorology
- Steady-state conditions → practically useful results
- Independent of individual characteristics
- Prediction of whole body and local thermal effects
- Based on the most advanced multi-node models
- Temperature scale index

Key applications

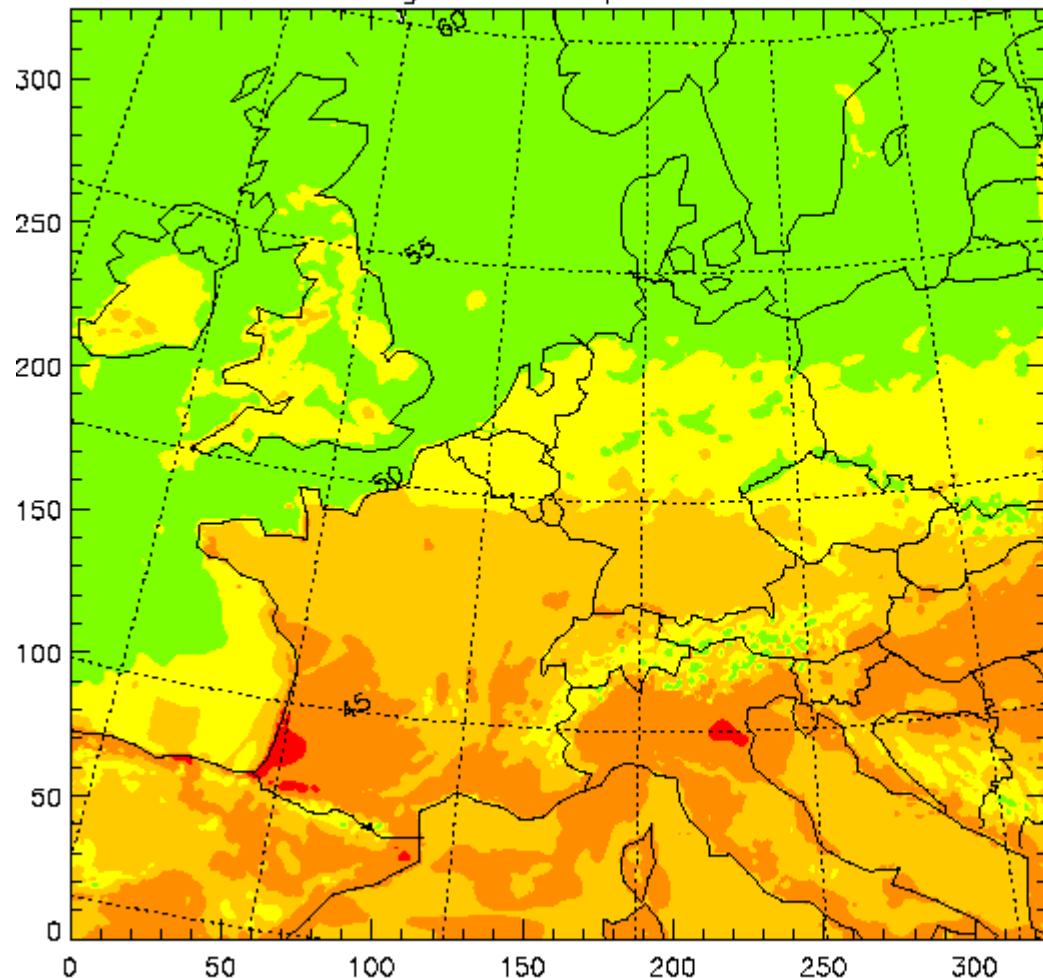

- Daily forecasts
- Public weather service
 - Warnings (windchill, heat load)
 - Advice (clothing, outdoor activities)
- Climate
- Bioclimatological assessments
 - Bioclimate maps in all scales (micro - macro)
 - Urban design, engineering of outdoor spaces
 - Consultancy for residence
 - Outdoor recreation and climatotherapy
 - Epidemiology
 - Climate impact research

Mean Heatwave 1968 - 1997 (16 heatwaves)
